Claims Allowed

Claims 1-18 are allowable over the prior art of record. The claims are allowed because the prior art does not anticipate nor render obvious the invention of a vehicle including a method and apparatus for travel direction determining section for determining whether a forward or a reverse command has been issued, an electric motor counterelectromotive force detecting section configured to detect a counterelectromotive force of an electric motor that drives a wheel of the vehicle, and a wheel rotational direction determining section configured to determine whether a wheel is rotating in a direction opposite to that indicated by the travel direction determining section.

Prior Art Discussed

The examiner has considered the references cited by the applicant in his Information Disclosure Statement, filed December 5, 2003. None of the references show all of the features of the claimed invention. The co-pending patent applications cited by applicant have also been considered and do not claim conflicting subject matter.

The references cited by the examiner are deemed to be pertinent to applicant's disclosure. The references to Shimizu '304, Shimizu '759 and Kadota '458 are all assigned to the instant assignee but do not claim conflicting subject matter. Hata '809 shows a hybrid vehicle control where an electric motor is used for reverse operation of the vehicle and the main drive train is disconnected during reverse operation, but does not show a counterelectromotive force detecting section, among other defects. Nada '599 shows an abnormality detecting method and apparatus for a hybrid vehicle but does not show a counterelectromotive force detection section, among other defects.
